Prerequisite: graduate standing in civil or industrial engineering or instructor approval. Presentation of the technological and engineering aspects of public transportation systems. Historical development of public transportation technologies. Vehicle and right-of-way characteristics, capacity and operating strategies. Public transportation system performance. Advanced public transportation systems. Same as CE 625.

COURSE DESCRIPTION:

The course provides the basic introduction to the field of public transportation operations, technology, and analysis. Approaches provided in this course will be applicable to different types of public transportation system problems. The approaches will incorporate concepts from economics, engineering, operations research, and theoretical analysis. Numerical examples will be provided to build understanding of the concepts and to indicate how they can be applied in practice to various modes and problems.
